The background is a solid teal color. It features several white, fluffy clouds scattered across the top. Five hot air balloons are suspended by thin black lines. The balloons have different color schemes: one with red and black vertical stripes, one with pink and black vertical stripes, one with teal and black vertical stripes, one with yellow and black vertical stripes, and one with purple and black vertical stripes. A large, light beige, irregularly shaped frame with a dashed border is centered on the page. At each of the four corners of this frame, there is a pink cross-shaped graphic with black circular ends.

Method: A total of 400 studies from 1995 to 2021 were identified by screening from Science Direct, Cochrane library, Medscape, Wiley Online Library, PubMed, and Taylor Francis. From these studies 29 articles were qualitatively included in our systematic review and 24 of them considered quantitatively eligible were included in the meta-analysis. Study analyzed by pooling the weighed mean difference (WMD) with the 95% confidence interval (CI) were study provided as a mean ± (SD) and pooled risk ratio (RR) was expressed for dichotomous variables. Pooled results were assessed with either a random effect or fixed effect model. Heterogeneity was evaluated using the I² statistic. Result: Comparison of HIFU and robotic surgeries with operation times of 86.13 ± 36.37 minutes to 120.2 ± 63 minutes and 166 ± 48.5 minutes were higher significant differences (I² = 97%, p < 0.00001), (WMD -111.88 [-189.68, -34.08]) with statistically significant (p = 0.005). Comparison of HIFU and laparoscopic surgery with operation times of 86.13 ± 36.37 minutes to 120.2 ± 63 minutes and 79 ± 30 minutes to 106.4 ± 38.5 minutes were not statistically significant (p = 0.75) with higher significant differences heterogeneity (I² = 96%, p < 0.00001), (5.51 [-27.82, 38.83]). Comparison of between blood losses and fibroid sizes at 154 ± 75 mL to 278 ± 164.6 mL and 6.5 ± 2.9 cm to 13.6 ± 3.1 cm respectively in laparoscopic surgery was higher significant differences (I² = 91%, p < 0.0007), (WMD 202.29 [87.77, 316.80]) with statistically significant (p = 0.0005). Between hospital stay and blood loss in laparoscopic surgery at 1.2 ± 0.9 days to 5.4 ± 0.2 days and 200 ± 15.9 mL showed significant differences (I² = 90%, p < 0.0001), (WMD -269.71 [-361.33, -178.09]) with statistically significant (p < 0.00001) while in robotic surgery was not significant. The follow-up symptom & health-related quality of life questionnaire at 3 months 45.3 ± 26.9 to 70.6 ± 26.9 in fibroids group and 61.6 ± 41.4 to 79.64 ± 17.91 in adenomyosis group and both shows significant differences (I² = 83%, p = 0.02), (WMD 14.08 [4.42, 23.75]) with statistically significant (p = 0.0004) and (I² = 97%, p < 0.00001), (WMD -15.95 [-28.06, -3.84]) with (p = 0.010). SSS follow up 3 months 27.2 ± 15.7 to 36.6 ± 7.9 of HIFU fibroids, heterogeneity test showed significant differences (I² = 95%, p < 0.0001), (WMD 16.22 [8.33, 24.11]) with statistically significant (p < 0.0001). In terms of pregnancy outcome, delivery outcomes were not significant between HIFU and laparoscopic surgery 4 (8) within 165 (219) and (7) 23 within 158 (224), the heterogeneity was not significant (I² = 0%, p = 0.44), (RR 1.06 [0.97, 1.17]) neither with for risk of delivering was not significant (p = 0.20). Conclusions: HIFU treatment reveals more efficient clinical and treatment outcomes than robotic or laparoscopic surgery, including improved symptoms, absence of bleeding, shorter operative time, shorter recovery time, and good benefits in both short-term and long-term quality-of-life.</p>
